Title of Change - Reconfiguration of SVTS console area within the shielded enclosure []

25X1

Change Proposal Number - SITE 8-ECP-88-3

[] This proposal was reviewed by the Network Certification Working Group on 17 January 1989. The following specific comments are provided.

25X1

1. [] It is recommended that the contract specifically require the contractor to maintain all previous SVTS requirements, including the 100 dB isolation.

25X1

2. [] After reconfiguration, the site accreditor is responsible for verifying correct installation by recertifying the console area.

25X1

3. [] While several changes included in the option indicate preparation for the use of external ports, this approval does not include the connection of these ports. All external systems connected to any SVTS external ports must be approved separately.
